

DOWNTOWN STREETCAR

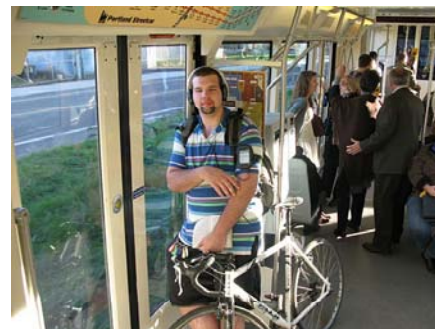

Catalytic Project

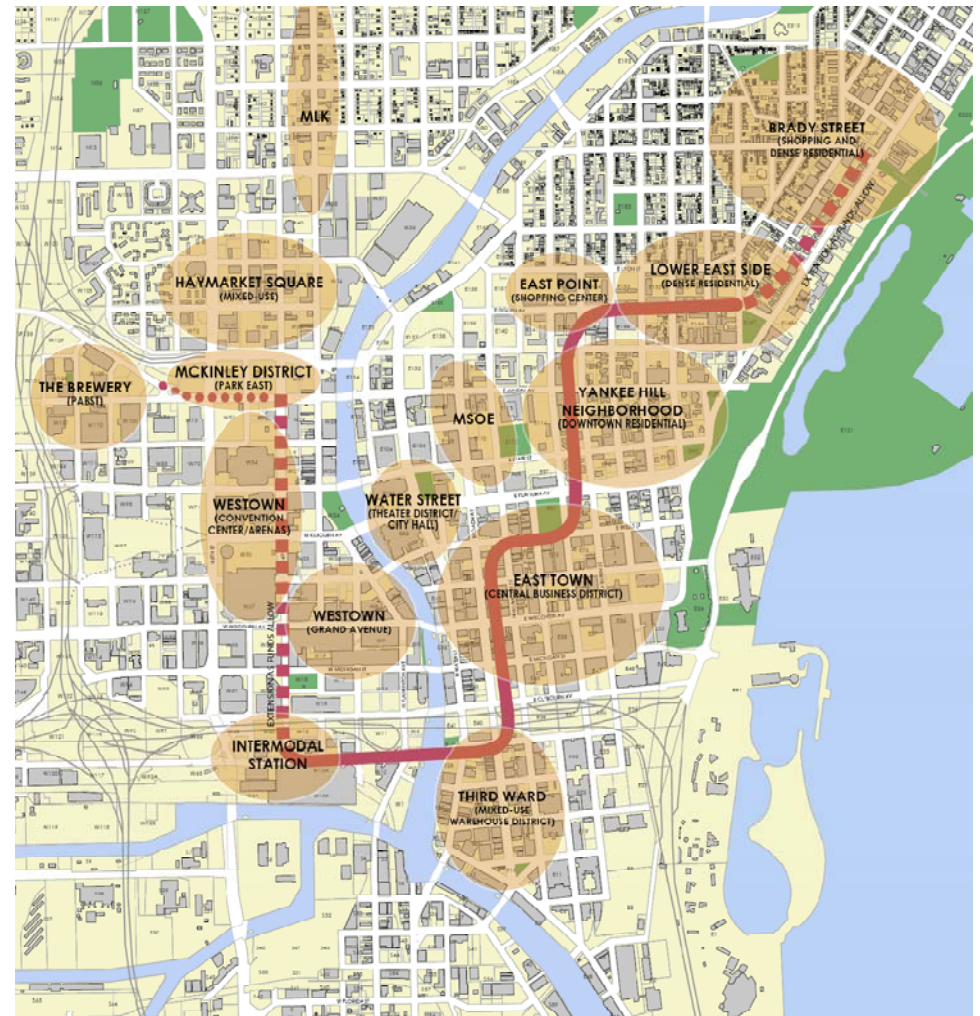

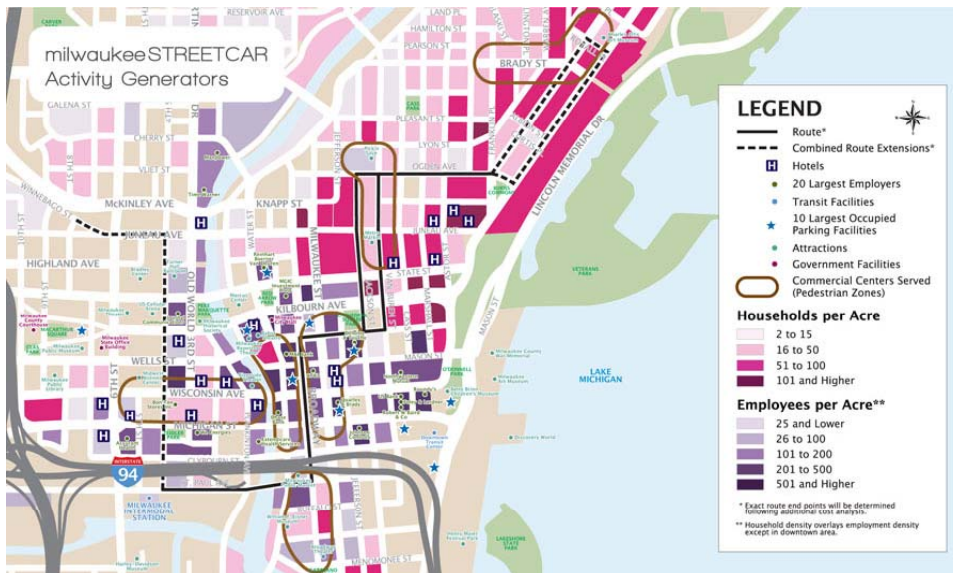

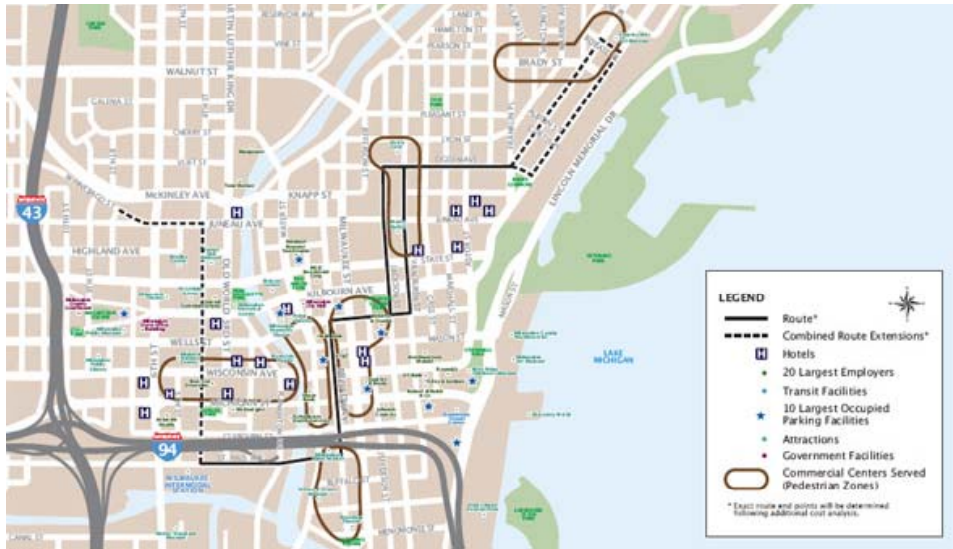

A modern, in-track, electrical streetcar system circulating between the Milwaukee Intermodal Station and Milwaukee's high-density lower east side.

Features of the Downtown streetcar connector will include:

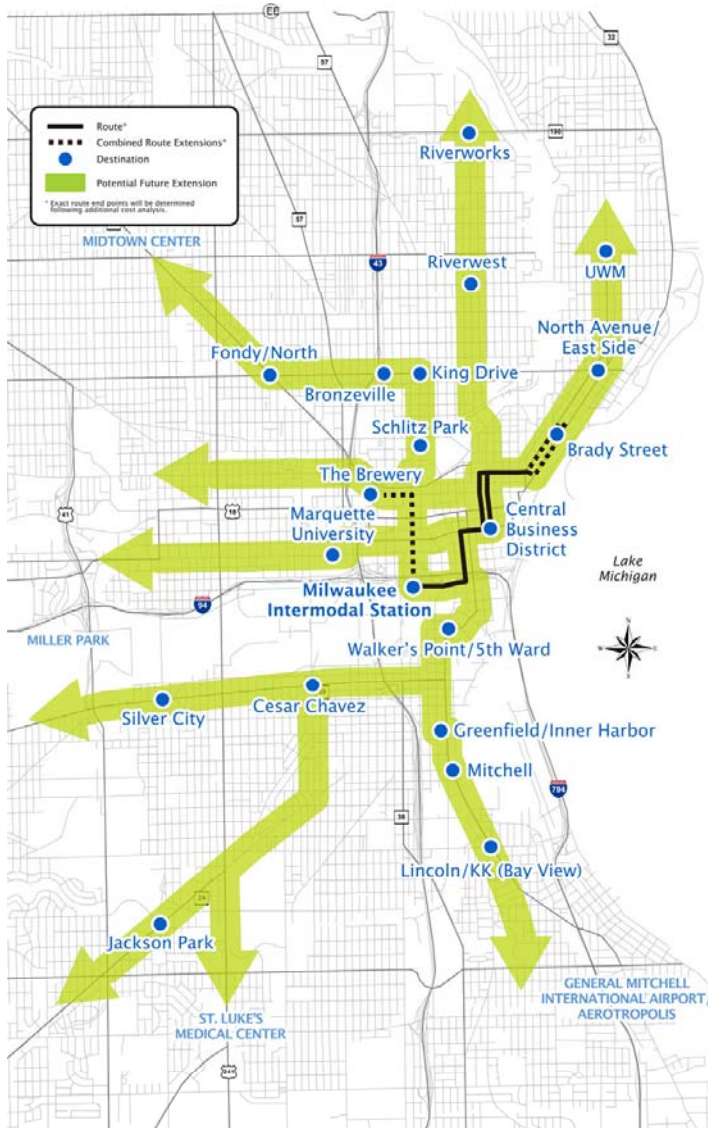

- A Downtown streetcar line linking Downtown's key destinations with its high density residential neighborhoods.
- Consider appropriate street designs, both immediate and long-term for streets where the streetcar will travel or become part of the right of way.
- Plan areas around the streetcar stops to take full advantage of the enhanced development potential created by the stop.
- Coordinate streetcar routes with "Park Once" locations and connecting pedestrian corridors.
- Streetcar stops would be enclosed to maximize comfort.
